The unprecedented pandemic that has struck humanity has brought in its trail changes which have started playing out and will last long, impacting the way we live and work. On one hand, it has caused mass scale shut downs, dampened business sentiments and spread fear across the country. Near future looked bleak and little hope appeared when one scanned the horizon. COVID 19 spread like wild fire and brought in its trail large scale disruption, loss of life and grinded the economy to an abrupt halt.

But the resilience in the human race resulted in the phoenix rising from the ashes and the adaptability quotient has come into play in full force. We have started evolving our workspaces and leveraging more on technology to answer the challenges posed by the pandemic.

Smart Cities - The habitats for future offer more hope now than ever. We need to build smart and build fast. With a burgeoning urban population and changed dynamics of our lifestyles, smart cities hold the key for offering greater productivity, safety and an ambient lifestyle to the citizens.

COVID, the disruptor should be used as the catalyst to accelerate the change and adopt the model of a changed way of work and play. This necessitates shifts in our habitats, the way we will commute and rest. To capture the essentials and play down on non-essentials will be the theme that will stay on with us for a long time. The cities of future have to become increasingly smart to capture the nuances of modern day living and at the same time remain scalable by morphing easily with the demands of time and environment.

India has taken rapid strides in this direction and smart cities have been a work in progress since 2015. Till date 100 cities have been identified to become smart. Some of them are existing cities and many are greenfield projects and work in progress. The changed scenario warrants that we take stock of where we are and where to proceed.

Besides looking at the growth map of the various projects in Smart cities across the country, this digital conference will also aim at identifying reliable set of suppliers, vendors and professionals to help achieve the targets for Smart Cities - The Future Growth Drivers."

The Digital Conference will have interactive sessions highlighting need of the hour technologies like Trenchless for subsurface work, Drones for Surveys etc and focus on the strategies which should be adopted & the actions which have to be taken both by industry & government to chart the way forward in a post covid world.

The event will be attended primarily by construction entities who are working on smart city projects and major stakeholders comprising of Central & State government authorities (e.g. CPWD, CPSEs, PWD, PHED, Power, Roads, Panchayati Raj, Urban Development, Housing Boards, etc.) contractors, consultants, material & goods suppliers, industry practitioners, CIDC Vishwakarma awardees, CIDC enlisted vendors and academia.

This is a good opportunity to join the platform to discuss, deliberate and showcase your products, technologies and services to a captive audience that is making Smart Cities a possibility. Do write in to us for any resource based support you would like to extend to this initiative or partner with us to share your intellectual capital or would like to explore sponsorship opportunities for display of your brand/logo/products & services. The deliberations and discussions during the day will help all chart One's individual growth agenda and provide valuable inputs to increase their bandwidth and throughput.

We also invite you to join hands with CIDC for this initiative and make a presentation on business opportunities in your state (esp. Smart Cities/Construction Sector), to a qualified and diverse base of Project Owners/Developers/Contractors/Service Providers/Manufactures from both public & private sectors inviting them to work in your state to ensure timely delivery of your infrastructure and construction projects.
